MYGIG LOCKPICK PRO
Installation and Operation Instructions

Thank you for your purchase of the Coastal Electronic Technologies, MYGIG LOCKPICK PRO. The LOCKPICK PRO is the latest version of the popular Mygig Lockpick and has been updated with many new features! Not only can it unlock and allow full use of your Chrysler/Dodge/Jeep MYGIG radio it can now set and control many functions using the radio touch screen PLUS it integrates a full multimedia harness with direct connections for rear and front cameras, and multimedia input and headrest output. This is only a partial list of included features:

- The ability to use your navigation system without restrictions including the ability to input addresses, search points of interest, etc. while in motion.
- You can also enjoy full use and video viewing of your radio’s DVD player and, if equipped, Rear Seat Entertainment (VES) Aux input jacks and Sat TV, while in motion if you desire.
- Even if your car does not already have rear seat entertainment with AUX input jacks, the Lockpick can provide full multimedia audio/video inputs. Included in your Lockpick harness are Audio and Video inputs to plug in the input of your choice and view it on demand and while in motion.
- Automatic activation of the TV mode in your radio with custom “channels” to control and activate Lockpick functions. (fully compatible with factory Sat TV rear entertainment systems without loss of function).
- Automatically enables the camera function in your radio with connections for up to 4 cameras. (fully compatible with vehicles already equipped with a factory rear camera)
- Automatic camera options for rear camera while in reverse and front camera while parking, turn signal camera, plus manual activation of any camera at any time.
- Advanced touch screen and steering wheel button control of camera functions
- USB update ability built in to keep your Lockpick current with changing software needs.

This manual will document in detail, the many functions of the LOCKPICK PRO and how to properly set the programming switches to your desired operation. Installation diagrams are included to guide you in various connection strategies. Please read this manual fully so that you can learn to take advantage of all of the exciting features and capabilities of the new MYGIG LOCKPICK PRO.

At this time, Coastal Electronic Technologies, Inc. would like to recommend that you have this installation completed by a certified mechanic or someone familiar with automotive electronics. This installation, while not time consuming, does require careful attention to detail and precise following of installation instructions.

Coastal Electronic Technologies, Inc. accepts no responsibility due to the improper installation or use of this product. Installation and / or use of this product implies and signifies user acceptance of this term of use. Please adhere to all driving laws in your state.
OK, let’s get started. On your MYGIG LOCKPICK PRO control box are switch settings which allow you to program your Lockpick for your vehicle and the features you would like to enable. The diagrams below are important to enable the MYGIG module to work with MYGIG radio systems. More than one switch may be turned on at a time to create the feature list you desire. Place switches in the desired configuration before plugging in the module. Improper switch settings will not damage anything however it could cause your radio to fail to turn on or conflict with existing accessories.

**SET VEHICLE SELECT TO “0”**

**LEAVE ALL COMMUNICATION SWITCHES IN THE UP / OFF POSITION**
Vehicles can be engineered to operate with different types of communication systems. Chrysler/Dodge/Jeep uses two types of systems in current year models. The MYGIG LOCKPICK PRO is designed and programmed to operate in any MYGIG capable vehicle regardless of communication type, however switch 1 AND 2 must be configured properly to identify the proper system before plugging in the interface. Consult the list above and position switch 1 AND 2 to the proper orientation before plugging in the LOCKPICK module. Placing the switches in the wrong position will cause the radio to fail to turn on. If you accidentally connect the interface with the wrong switch setting, it is necessary to turn the car off and unplug the interface, before properly setting the programming switches on the interface.

NAVIGATION RADIO UPDATING (older Mygig radios)

The MYGIG navigation radio can be updated by placing an update disk in the player. The radio will recognize that the disk is an update disk and begin the process of loading automatically. Radio updates are provided periodically by the radio manufacturer to address problems which have been recognized in the normal operation of the radio and also to increase features which may have been created since your vehicle was purchased. Make sure your Mygig radio is kept up to date with the latest software to insure proper operation and reliability.
The MYGIG LOCKPICK PRO is designed with simple “T” harness connectors, equipped with factory male and female connectors for direct connection to your screen. Specific links with videos demonstrating methods of gaining access to the rear of the standard MYGIG radio is available for viewing at various links at: http://www.coastatech.com/MYGIG.htm

Most installations are relatively simple with just a single panel surrounding the radio which must be pulled free before exposing the radio. Remove 4 screws holding the radio to view the connectors on the rear of the radio. Consult a professional installer if you require assistance plugging in your Lockpick.

1. With access to the rear of the screen, unplug the matching GRAY and WHITE (if present) connector(s) and plug them into the female connectors of your MYGIG LOCKPICK PRO harness. Then plug the male connectors of the LOCKPICK harness into the earlier factory locations. The connectors are keyed and cannot be plugged in to the wrong location. Line up the connectors carefully and make sure that no pins are bent or misaligned before pressing hard to make sure the connector is fully seated.

2. Even if your radio did not have a white connector plugged in from the factory, make sure and plug the White connector into the location shown above. Failing to plug in the WHITE connector will cause the radio to display a blank screen when the Lockpick camera functions are activated.

3. Make sure the Dip Switch and Vehicle Select Dial settings for your Lockpick are configured properly before plugging the controller into the harness. If you plug in the controller and then change switch settings, the new settings will not be programmed and improper operation will result.

4. 2008-2009 (some 2010) vehicles with factory rear view cameras are powered only while the vehicles is in Reverse. If you would like to enable full control and viewing of your FACTORY REAR VIEW CAMERA while in DRIVE or other gears, the included REVERSE CAMERA POWER output wire must be connected as the power source for your camera. This 12V power output will turn on when the vehicle is placed in reverse and also when selected by the user using the radio buttons.

   If you choose not to connect the REVERSE CAMERA POWER wire provided by the Lockpick harness to your factory rear camera, the rear camera view will continue working while in reverse. However, because the rear camera will have no power in other gears, it cannot be activated by the Lockpick and will display as a blank or flashing picture if activated manually while in Drive.

   If your installation requires the use of the REVERSE CAMERA POWER Lockpick wire to enable factory camera operation in all gears, it is simply a matter of running a wire to the factory camera and connecting it in place of the original power wire. Remove any panels covering the rear hatch in your vehicle. Then use a meter or indicator lamp to determine the reverse power connection on the factory camera connector. Make sure you are measuring directly on the connector at the
camera location and not further back in a different location. This wire will switch to 12V while the vehicle is in REVERSE and will be zero at other times. Cut this wire and connect the REVERSE CAM 12V+ power connection from the Lockpick to the camera directly. Do not reconnect the original camera power source wire or fail to cut the wire at the camera. Instead tape it up and disregard it. The Lockpick will provide all necessary power and timing for the factory camera. Failing to cut the wire or connecting the Lockpick power and factory power at the same time could cause the reverse tail light to illuminate at improper times. Also, cutting the wire at a different location other than directly on the camera connector could possibly interrupt power to other functions such as the actual reverse taillights or rear obstacle detection systems.

5. **If you do not currently have a rear view camera and want to add one to your vehicle, the Lockpick makes it easy.** A REVERSE CAM 12V + power output and Ground connections is provided on the Lockpick harness for your aftermarket rear camera. The Lockpick harness is equipped with a rear camera video input to make your installation simple.

6. **If you would like to add a Rear Cargo/Bed camera to your vehicle,** connect the Cargo Cam’s power to the REVERSE CAM 12V + power output and also to the ground provided on the Lockpick Harness. Plug in the Cargo Cam video to the Second Reverse/Cargo video input connection provided on the Lockpick harness. It is OK to connect rear and cargo camera power to the same Lockpick camera power output if installing multiple rear view cameras. The Lockpick can show this camera on demand or automatically instead of your standard rear camera when pulling a trailer, etc.

7. **If you want to add a front camera, side cameras or all three at once,** Connect your camera powers to the Lockpick harness output labeled ADDITIONAL CAM POWER 12V+ and connect all grounds to the GROUND provided on the Lockpick harness. Connect the video from your cameras to the RCA video inputs labeled on your Lockpick module. **Place Option Dip Switch 5 DOWN if installing simultaneous front, rear, left and right cameras to enable special programming for this option.**

8. **Also present on your Lockpick harness is a 12V ACC output connection.** This ACC output is created by the Lockpick and can be used as a convenient 12V switched power source for many of your accessories. It is rated for a constant 1.5 Amps and will automatically turn on and off at the proper times of your vehicle use. If your power needs are greater than 1.5 Amps, you may use the CONSTANT 12V output conveniently provided by the Lockpick harness and switch it on and off through a relay powered by the ACC power output of the Lockpick harness.

**NOTE:** The connections for 12V Constant Battery power (YELLOW), ACC Ignition power (RED), GROUND (BLACK), Reverse/Cargo power (ORANGE W/STRIPE), Front/Baby cam power (RED W/STRIPE), are provided as a BONUS in your wiring harness for you to use when connecting additional accessories such as a DVD player, Game, Cameras, Radar detector, etc., without worry that they might drain your battery when the car is turned off. The ACC wire can power up to 1.5 Amps constant. Higher loads should be connected with a relay.

**Do not attach the Constant or ACC wires directly to the vehicle wiring or ignition switch. The Lockpick is plug and play for standard DVD/AUX/NAV/VIDEO/AUDIO/CAM unblocking and does not require connections for power or ground. Connecting these Lockpick outputs to the vehicle wiring can damage the unit and cause improper operations.**

**When the MYGIG LOCPICK PRO is turned on for the first time, allow 30 seconds before operating the various functions and features. This allows the Lockpick to prepare the radio and screen views for standard operations. During the first startup, the Lockpick will create the SAT TV mode and all touch screen options to begin your interface for use. The Lockpick will automatically update the TV channels, requiring only a couple of seconds, each time the TV mode is selected. During the time that “Updating Channels” or “Initializing” is displayed on the TV mode screen, the touch screen options are not available for selection.**
The MYGIG LOCKPICK PRO automatically activates the TV mode and generates up to 5 pages of touch screen options for simple user control. Touch the on-screen button to select the desired function. **Mygig radio buttons and locations will vary with year and Mygig radio model.

**LOCKPICK PRO Options Page 1**
1. Select REAR CAM to manually activate and view the rear camera video (if present).
2. Select CARGO CAM to manually activate and view the 2nd rear camera video (if present).
3. Select FRONT CAM to manually activate and view the front camera video (if present).
4. Select AUX VID to view any video connected to AUX VID input.

**LOCKPICK PRO Options Page 2**
1. Touch CHANGE OPT to turn ON or OFF the feature selected below it.
2. Select to automatically view a Rear camera while in reverse (default is ON). Select OFF if no rear camera is present to avoid blank screen while in reverse.
3. Select to automatically view a 2nd Rear / Cargo camera when the vehicle is placed in Reverse. This becomes the default rear when selected.
4. Select to automatically view a front camera when the vehicle is below 7 mph. (default is OFF).

**Steering wheel button controls are activated while manually viewing a camera. Press Seek UP or Seek Down to toggle between video inputs. Press middle button on the back of the left side of the steering wheel to turn videos off. (See steering wheel drawing provided)**

**Press the Uconnect button 2x quickly to turn OFF, or turn back ON, any of the CAM/AUX videos. You can also toggle these video sources ON/OFF in any mode (AM, FM etc.) by pressing the Uconnect button two times. (Location of Uconnect button will vary with radio model)**
LOCKPICK PRO Options Page 3

1. Touch CHANGE OPT to turn ON or OFF the feature selected below it.
2. Select AUTO TURN to automatically view a side camera when the corresponding turn signal is activated. Page 1 menus will change to allow manual left/right camera selections.
3. Select to automatically provide override for navigation address entry (if equipped) and for automatic enabling of VIEW VIDEO button. (default is ON). a will be displayed when activated manually while in modes other than TV.
4. Reserved

**If AUTO OVR is set to OFF, (manual mode), press power button 2x while in any mode (DVD, VES, Nav input etc.) as needed to temporarily turn override on and off.

LOCKPICK PRO Options Page 4

1. Touch CHANGE OPT to turn ON or OFF the feature selected below.
2. Select ADD VES to enable the VES rear entertainment mode in vehicle not already equipped. (default is OFF). Enable VES to input Video and Audio inputs provided in your Lockpick PRO harness.
3. Select NAV if your Mygig radio is equipped with Navigation features. (default is ON). If your radio does not have navigation features, turn this option OFF to provide proper override functions.
4. Select INFO tab to display software revision. The LOCKPICK PRO is USB upgradable.

LOCKPICK PRO Options Page 5

1. Touch to arm 0 – 60 mph timer. Timer will activate when vehicle is in motion and stop automatically when 60 mph is reached. Elapsed time will display on radio.
2. Touch to arm 0 – 10 second timer. Timer will activate when vehicle is in motion and stop automatically after 10 seconds. Maximum speed reached will display on radio.
3. Touch to STOP either timer.
4. Touch to Reset time or speed to 0.
If your vehicle is already equipped with Sat TV, the Mygig LOCKPICK PRO will automatically detect the factory system and add a 6th option page with the factory channels to preserve full functionality.

**IMPORTANT** IF YOUR RADIO DOES NOT ALREADY HAVE THE FACTORY UCONNECT FEATURE PRESENT, FOLLOW THE INITIALIZATION SEQUENCE BELOW.

- **AFTER PLUGGING IN THE LOCKPICK, CRANK THE CAR UP, THEN TURN IT OFF AND REMOVE THE KEY.**
- **LET THE VEHICLE REMAIN OFF WITH THE DOORS CLOSED FOR A MINIMUM OF 1 MINUTE.**
- **RETURN TO THE VEHICLE AND CRANK IT UP TO ENABLE THE UCONNECT BUTTON OPERATION NECESSARY FOR THE LOCKPICK.** (note: The Lockpick will allow the uconnect button to be used to operate some of the Lockpick functions. It cannot create uconnect features in radios that do not have the internal circuitry and software to provide telephone and voice commands)

(Radio buttons positions may vary with model and year)

Within the the MYGIG LOCKPICK PRO options, the user can add the VES rear entertainment mode to any MYGIG radio not already equipped. **Video and audio INPUTS are provided on the LOCKPICK PRO harness** which can allow aftermarket multimedia systems (DVD, Satellite, Streaming, etc.) to display their video on the MYGIG system screen and have the audio play through the factory sound system WITHOUT FM modulators.
The Lockpick video and audio inputs are selected on the touch screen by pressing the VES mode button created by the MYGIG LOCKPICK PRO. If the on-screen display does not show the AUX input selections, press the VES MODES button at the bottom of the screen. The REAR AUX 1 input can then be selected by touching the onscreen AUX 1 button. This will activate the audio and video inputs of the multimedia inputs on the Lockpick harness. If you are in PARK, the view video button will be available in the lower right corner of the screen for front screen video viewing of your AUX input. The LOCKPICK PRO can allow the view video button to be automatically enabled even if you switch to DRIVE or, if the AUTO OVERRIDE is disabled, it can be enabled manually by pressing the power button 2x.

The A/V OUTPUTS on the LOCKPICK PRO harness can output the MYGIG DVD video and audio directly to a rear screen system. The MYGIG radio is capable of DUAL ZONE operation.

- This means it can output one set of audio or audio/video to the rear system while allowing the front operator to view or listen to something else on the MYGIG radio itself.
- The system cannot output the A/V inputs from the LOCKPICK PRO harness to the A/V outputs on the harness at the same time.
- The MYGIG radio can output the video from the internal DVD player to the rear system while simultaneously viewing and listening to either the AUX input audio and video provided on the LOCKPICK PRO harness or any of the standard functions of AM, FM, SAT or hard drive. You can also send just the audio from the AM, FM, SAT, or hard drive out to the rear seat entertainment system.

To select which audio and video source you would like to send out of the A/V output of the LOCKPICK PRO harness, press the menu button and then select the onscreen button for REAR VES.

- The screen will then show the possible options for outputting MYGIG radio and video
Select the source 1 tab and not the source 2 tab

Any option for output is available on the radio or media tabs. The VES output options are not selectable as they are applicable only to a factory VES system. If you would like to send out the picture and the sound from a DVD playing in the MYGIG radio to your additional screen, select the MEDIA tab and then the DISC option. The DVD in your MYGIG radio will continue to play and output its audio and video to your rear seat system even if you then switch to any of the different functions available on the MYGIG radio for the front seat operator.

Installation Q & A:

1. *I installed the Lockpick and now my radio does not turn on.*
   Check all interface controls and switches. Insure that vehicle select is set for (0) and that option switches 1 and 2 are correctly set for the vehicle type (see application chart). Check to make sure you have installed the Gray and White connectors behind the radio and that all pins were straight before fully inserting the connectors.

2. *When I put the car in Reverse, the radio screen blanks out. I do not have a rear view camera.*
   The Lockpick automatically activates a rear view camera input for your radio. If you do not intend to install a rear view camera or do not want it activated automatically, refer to page 2 of the Lockpick options in the TV mode to disable the AUTO REAR function.

3. *I installed the Lockpick but I do not see a VES mode.*
   The default setting for the Lockpick is VES mode OFF. To activate the VES mode and take advantage of the audio and video inputs provided by the Lockpick harness, select the ADD VES option on page 4 of the Lockpick options menus. After setting the option to ON, turn the car off and then back on. The VES mode will be activated and ready for use.

4. *I installed the Lockpick and now my factory VES rear entertainment is intermitting.*
   The Lockpick is able to create a VES mode within your radio to allow a multimedia audio and video input as well as an output for additional screen(s) if desired. The default setting on page 4 of the Lockpick options is VES OFF. If you change the option and turn it ON when you already have a factory VES system, the communication will conflict. Set the option to OFF to restore factory VES operation.

5. *My radio does not have a VIDEO button viewable at any time. Will the Lockpick work for this car?*
   The Lockpick will enable the video function regardless of whether it is currently dealer activated.
6. I do not have a navigation radio or my radio is a new RHB navigation radio. Will the Lockpick turn on the Uconnect and voice recognition functions?
No, these radios do not have the hardware internally to receive Bluetooth or provide support for voice recognition. The Lockpick will remove the error message saying the feature is not active when the Uconnect button is pressed so that it can be used for Lockpick PRO operations. Follow the initialization procedure described earlier.

7. I turned on one of the Camera or VES AUX input functions created by the Lockpick and all I see is a flashing picture or blank screen when I try to look at the video.
This means you don’t have anything connected or, do not have the camera turned on to supply a video input. The radio screen will be blank or flash when there is no video from your connected device. Common solutions for camera pictures are normally resolved by rechecking the power connections and insuring that all cameras are powered by the connections provided on the Lockpick harness. This includes the factory rear view camera, if your vehicle requires a Lockpick connection to power it while in a gear other than reverse. Also, check to make sure you have fully inserted the White connector on the Lockpick harness and the video connections for your device are plugged in. Connectors not fully inserted may create intermittent operations.

8. I turned on my car for the first time after installing the Lockpick and I do not have any of the menus in the SAT TV mode as shown in the illustrations.
The first time the Lockpick is powered on, it will wait 30 seconds before loading the menus for Lockpick operations in the SAT TV mode. After this initialization, the menus will be loaded and present when the radio is turned on. The Lockpick will also refresh the menus each time the SAT TV mode is selected. During the couple of seconds that the menus are reloading, the touch screen options are not available for selection.

LOCKPICK PRO USB Updates
The LOCKPICK PRO includes the ability to be updated via a USB connection to a laptop PC. If directed to update by one of our technicians, consult our website at CoastalEtech.com/usbupdate.htm for specific downloads and instructions for your Lockpick. It is not recommended to update the Lockpick without first consulting a technician.

LOCKPICK PRO MULTI-CAMERA OPTIONS

The Lockpick PRO Option switch 5 can be placed DOWN to allow the user to install a rear camera along with front and side mounted turn signal activated cameras – all at the same time. This key feature of the PRO line allows full 360º camera placement while the Lockpick controls automatic activation or manual viewing of each camera. The diagram on the last page details the input locations on the Lockpick module and cable for proper operations in this special mode. Plug the cameras into the locations shown and connect camera power to the Lockpick harness. Make sure that the Lockpick module is unplugged before Option switch 5 is placed in the DOWN position for this option to be activated. Allow 30 seconds after the radio is turned on to load the new menu choices to your radio.
